Parallels® Plesk Panel 10 Features

Feature	Benefit
Easy to use	
• New! Simplified and customized user interfaces	A structured, easy-to-use, end-user control panel simplifies users' hosting management experience, reducing both churn and support costs. And the intuitive Web-page model lets users learn quickly, rapidly find the desired functionality, and still have full access to all needed power.
• New! Separate administrator user interface	Plesk Panel 10 now comes with a separate administrator interface, optimized for server and business management.
• New! Power-user mode	A new user interface for dedicated and VPS hosting simplifies administrators' experience by turning off unneeded shared hosting features.
• New! Server health monitoring	Health-monitoring capabilities simplify server troubleshooting and let you configure alarm thresholds for automatic notification.
• New! Control panel improvements	Performance improvements for control panels make pages load much faster.
• New! Upgradable Apache configurations	Your customized Apache configurations will now remain in force when you upgrade.
• New! APS 1.2 licensing support	You can easily install applications onto your servers—including global applications, such as anti-virus software, that apply to all customers.
• New! Role-based access	Customer administrators can specify application access based on user roles, enabling them to easily limit access to only those users who need it.
• New! Easier, faster upgrades	A host of new features make upgrades faster and simplify recovery from upgrade failures. Key enhancements include: • Better protection against source environment inconsistencies, with the ability to resolve conflicts on the fly. • Database rollback when problems occur. • Templates that let you specify whether Parallels Virtuozzo Containers will upgrade automatically or not. • A pre-upgrade account analyzer and post-upgrade account transformation wizard to help automate the upgrade process. • Forward-compatible Key Administrator keys, so you'll never have to replace lease licenses when you upgrade. • Ability to set up a Key Administrator license pool and instantly issue licenses to new IP addresses. • Support for native packaging systems, with optional automatically updating system components for CentOS and RHEL.
• Broad range of domain and client management capabilities	Complete customer and business management capabilities include support for account resources, FTP , SSL, e-mail accounts, Web mail, favorites, databases, traffic limits, DNS management, service rebooting,

Parallels® Plesk Panel 10 Features

	Web statistics, shell access, service plans, cron jobs, backups, and search capabilities—plus an internal file manager.
• Multilingual support	Built-in support for English, Spanish, German, French, Italian, Dutch, Russian, Chinese (simplified and traditional), and Japanese means you don't have to worry about localizing your hosting services.
• Built-in VPS support	A built-in power panel provides a seamless, single interface for VPS management, simplifying administration.
• Single sign-on	Single-sign-on capabilities simplify administration, eliminating the need to maintain multiple user names and passwords.
Profitable	
• New! Ability to easily add and sell applications	Now you can increase your revenues and reduce churn by adding applications, mobile Web sites, and site-building software to your service plans, using an easy, one-click installation procedure. You can also sell premium commercial applications to your customers through a Provider Storefront and applications catalog, with special application pricing based on deals we've pre-negotiated. More than 200 applications are available, including free open-source software.
• New! Improved security and performance	FastCGI lets you isolate sites in a shared hosting environment and limit the resources available to each user, resulting in increased uptime for your customers, enhanced customer satisfaction, and reduced churn. When you use Plesk Panel 10 with Cloud Linux, you also get SecureLVE jail shell support, enabling you to isolate data as well.
• New! PCI compliance for panel and billing system	Full PCI compliance in both Plesk Panel 10 and the Customer & Billing Manager means you can confidently launch e-commerce applications, knowing they will pass any PCI compliance scans.
• New! Improved password security	Assignment of random default passwords and a password strength indicator protect your servers from hackers and lower support costs attributable to broken passwords.
• New! Improved VPS optimization	VPS optimization for Parallels Virtuozzo Containers delivers the lowest memory consumption and highest server density available anywhere.
• New! More flexibility in hosting plans	New and more flexible hosting concepts support a superior growth path to the future. Key features include multi-domain hosting; ability to assign multiple add-on plans to a subscription; and ability to automatically update subscription settings when plans change.
• New! Caching server support	Now you can put a caching server in front of Apache to support faster performance and more Web sites without adding hardware.
• New! Migration without additional disk space	You will save money on hardware costs when migrating, because migration no longer requires twice the disk space.
• Support for unique service plans	You can easily assign groups of resources to service plans, enabling you to create unique plans that appeal to different sets of customer needs.

Parallels® Plesk Panel 10 Features

• Support for broad range of third-party applications	You can offer richer service plans by purchasing third-party products (such as spam filtering, antivirus software, e-commerce applications, game servers, domains, SSL certificates, backup software, and Google Tools) along with your license key and integrating them with specific service plans.
• Built-in product management tools	The panel comes with an auto-installer and auto- and micro-update capabilities, saving you time and money
• Reseller support	You can increase your profitability by having others help you sell. Built-in reseller support lets you easily create reseller accounts.
Complete	
• New! Fully integrated billing and customer management (free with Plesk Unlimited licenses)	Our DSS-compliant billing system, now with European tax and invoicing capabilities, completely automates your hosting experience and simplifies management of the full customer lifecycle, from service plan creation to account provisioning to invoicing and billing.
• New! Intuitive and modern SiteBuilder (free with Plesk Unlimited licenses)	The brand-new SiteBuilder, rebuilt from the ground up, enables instant Web site creation. It includes point-and-click and drag-and-drop capabilities, plus 60 prebuilt templates, complete with content appropriate for different small business types and personal interests.
• Broad development platform support	You can choose from a wide array of development platforms, including Apache Tomcat, Adobe ColdFusion, Ruby on Rails, .NET, and DotNetNuke.
• Widest operating system support	Broad operating system support lets you "run what you brung," whether that's Windows Server 2003, 2008, or 2008 R2; CentOS, Debian, Red Hat Enterprise Linux, Ubuntu, Cloud Linux, or SUSE.
• Most extensive support for Windows solutions	The panel comes with built-in support for Internet Information Services, .NET 4.0, and SQL Server.
• Broad support of virtualization technology	You can choose whichever virtualization technology you're most comfortable with, including Parallels Virtuozzo Containters, Parallels Server Bare Metal, VMware EXSi, Citrix XenServer, Red Hat KVM, and Microsoft Hyper-V.
• Direct API access	You can tie Plesk Panel to any external systems you want, such as external billing solutions or domain registration software.
