1. About the Parallels Virtualization SDK

Parallels Virtualization SDK is a development kit that can be used to create custom software solution for Parallels Desktop for Mac.

Parallels Virtualization SDK comprises the following components:

- C header files
- Dynamic libraries
- Python package for developing client applications in Python
- Parallels Virtualization SDK Programmer's Guide
- Parallels C API Reference Guide
- Parallels Python API Reference Guide

2. System Requirements

To develop applications on Mac computers using the SDK, the following requirements must be met.

Hardware Requirements:

- Mac computer with Intel Core 2 Duo, Core i3, Core i5, Core i7, or Xeon processor.
- Minimum 2 GB RAM.

Software Requirements:

- macOS 10.10 – 10.13
- Python 2.7 to develop applications in Python using the Parallels Python API.

3. Installing the Parallels Virtualization SDK

- 1) To install the Parallels Virtualization SDK, double-click the SDK installation image file.
2. Double-click the Parallels Virtualization SDK item.
3. Follow the onscreen instructions and install the SDK.

4. Reading the Parallels Virtualization SDK Documentation

The latest documentation can be viewed and downloaded from <https://www.parallels.com/products/business/resources/>

On a Mac computer, the documentation is located in
/Library/Frameworks/ParallelsVirtualizationSDK.framework/Resources
